

# GoldenFigCoin

## OVERVIEW

The GFC is a token that can be used for trading below-ground gold and silver resources & reserves in nature at a discounted price, significantly lower than its spot price. The GFC aims to move the below-ground gold and silver trade to the blockchain.

The GFC governs the ecosystem of the GFC community called Figium. GFC is a decentralised trust fund that combines traditional crowdfunding with blockchain technology and easy-to-engage smart contracts.

The GFC plays a critical role to provide the financing needed by small and medium-sized mining enterprises to bring the discovered and measurable reserves to the economy, at a reasonable cost and with zero bureaucracy, by eliminating the intermediaries in the supply chain.

GFC wallet enables real-time cryptocurrency to fiat currency conversion, enabling our community to use Figcoin and other particular crypto assets for all payments globally.

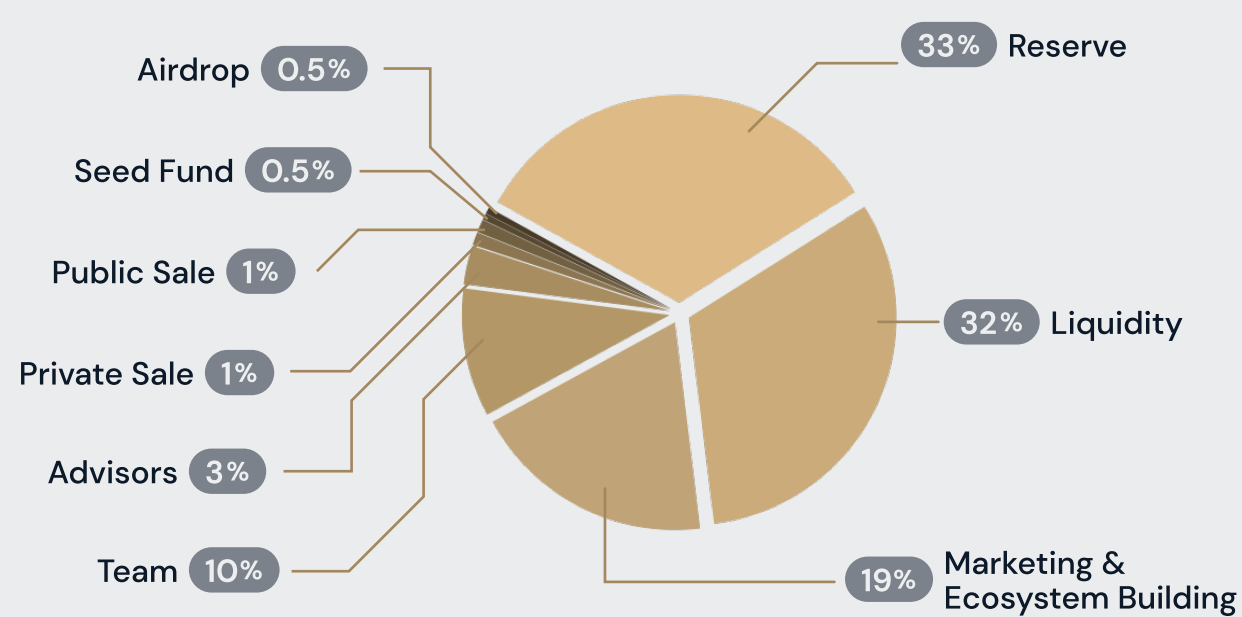

## KEY FEATURES OF

### Figium Ecosystem

- ☑ Multichain Platform
- ☑ Open Governance
- ☑ Transparency
- ☑ Burning Mechanism
- ☑ Buy Back
- ☑ Farming
- ☑ DAO Model
- ☑ NFT Marketplace
- ☑ Metaverse
- ☑ DeFi
- ☑ Wallet
- ☑ Debit Card for Payments

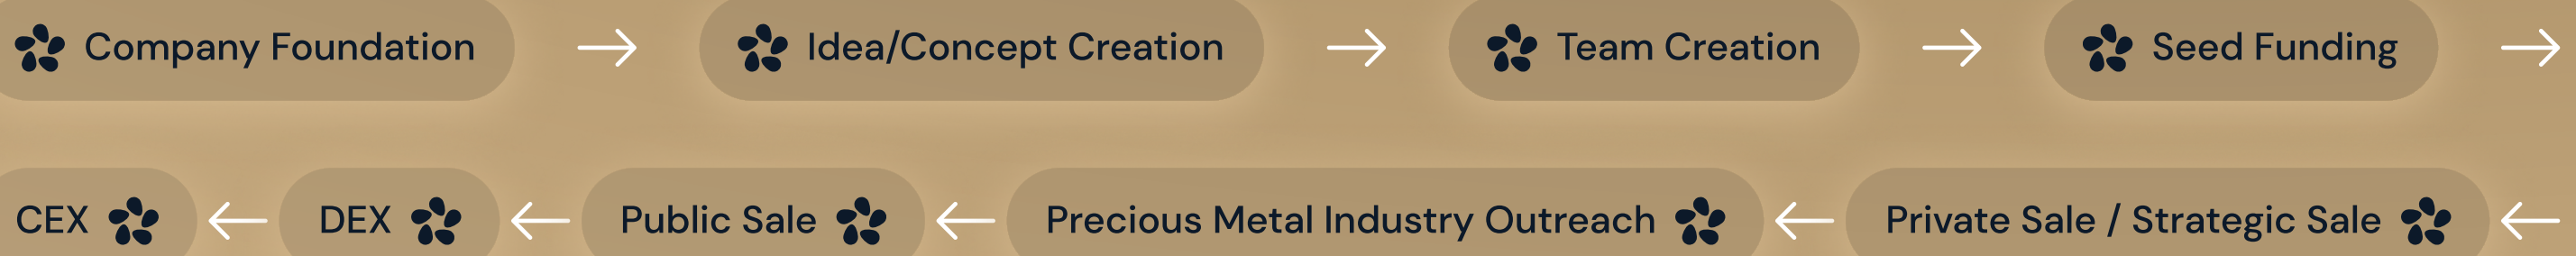

## TOKEN ALLOCATION

## TOKENOMICS

Token Symbol	GFC
Platform	BSC
Acceptance	BUSD, USDT, BNB, BTC, ETH
Token Sales	1,000,000,000
