

OVERVIEW

The GFC is a token that can be used for trading below-ground gold and silver resources & reserves in nature at a discounted price, significantly lower than its spot price. The GFC aims to move the below-ground gold and silver trade to the blockchain.

The GFC governs the ecosystem of the GFC community called Figium. GFC is a decentralised trust fund that combines traditional crowdfunding with blockchain technology and easyto-engage smart contracts.

The GFC plays a critical role to provide the financing needed by small and medium-sized mining enterprises to bring the discovered and measurable reserves to the economy, at a reasonable cost and with zero bureaucracy, by eliminating the intermediaries in the supply chain.

GFC wallet enables real-time cryptocurrency to fiat currency conversion, enabling our community to use Figcoin and other particular crypto assets for all payments globally.

KEY FEATURES OF

Figium Ecosystem

- Multichain Platform
- □ DAO Model
- Open Governance
- **□** NFT Marketplace
- ☑ Transparency
- | □ | Metaverse
- Burning Mechanism
- □ DeFi
- □ Buy Back
- □ Wallet
- □ Farming
- **Debit Card for** Payments
